Assignment 2

1.

x	fx	xf(x)	$(x-11)^2 f(x)$
20	.05	1	4.05
21	.06	1.26	6
22	.07	1.54	8.47
23	.08	1.84	11.52
24	.09	2.16	15.21
25	.12	3	23.52
26	.15	3.9	33.75
27	.13	3.51	33.28
28	.10	2.8	28.9
29	.10	2.9	32.4
30	.05	1.5	18.15

x Q1: Needs revision.

$\boxed{\mu = 25.41 \quad \sigma = 14.66}$ $\sigma^2 = 215.15$

2. a. $11 - 14.66$ x Q2a: Needs revision. $11 + 14.66$

$\boxed{47\%}$ $3.66 <$ < 25.66 $\quad \overset{20}{.05} + \overset{21}{.06} + \overset{22}{.07} + \overset{23}{.08} + \overset{24}{.09} + \overset{25}{.12} = .47$

b. ✓ Q2b $11 + 2(14.66)$ $\quad 11 + 2(14.66)$

$\boxed{100\%}$ $-18.32 <$ $< 40.32 = 20 - 30 = 1$

3.

		✓
26	.15	1
27	.13	2
28	.10	3
29	.10	4
30	.05	5

$.15 + .13 + .10 + .10 + .05 = .53 -$ ✓ Q3

$1 - .53 = \boxed{.47}$

4. $.15 + .13 + .1 + .1 + .05 = .53 = \boxed{53\%}$ ✓ Q4

5. $1(.15) + 2(.13) + 3(.10) + 4(.10) + 5(.05)$

$.15 + .26 + .3 + .4 + .25 = 1.36$

$1^2(.15) + 2^2(.13) + 3^2(.10) + 4^2(.10) + 5^2(.05)$

$.15 + .52 + .9 + 1.6 + 1.25 = 4.42$ ✓ Q5

$4.42 - (1.36^2) = \sqrt{2.57 = \sigma^2} = \boxed{\sigma = 1.6}$
