for $x=0$ 0.8693

$\mu = 1.36$

for $x=1$

$(1-1.36)^2 =$

$(x=1.36)^2 \times P$

$(-0.36)^2 = 0.1296$

$0.1296 \times 0.15 = 0.0194$

for $x=2$

$(2-1.36)^2 = (0.64)^2 = 0.4096$

$0.4096 \times 0.13 = 0.0532$

for $x=3$ $(3-1.36)^2 = (1.64)^2 = 2.6896$

$2.6896 \times 0.10 = 0.2690$

for $x=4$ $(4-1.36)^2 = (3.64)^2 = 13.2496$

$13.2496 \times 0.05 = 0.6625$

$0.8693 + 0.0194 + 0.0532 + 0.2690 + 0.6970 + 0.6625 =$

2.57

$\sqrt{2.57}$

≈ 1.60 → option typically moves about \$1.60 up or down from the Average
