c) What is the probability the the amount withdraw from the ~~AA~~ ATM will fall within 2 standard deviation (σ) of the the mean.

(Mean) $\mu = 50$

(SD) $\sigma = 26.27$

Step1)

$$P(50 - 2(26.27) \leq B \leq 50 + 2(26.27) =$$

$$P(50 - 52.54) \leq B \leq 50 + 52.54) =$$

$$P(-2.54) \leq B \leq (102.54) =$$

step2)

$$= P(10) + P(20) + P(40) + P(60) + P(80) + P(100)$$

$$= 0.10 + 0.15 + 0.30 + 0.15 + 0.25 + 0.05$$

$$= 1$$

x	F(x)
10	0.10
20	0.15
40	0.30
60	0.15
80	0.25
100	0.05
